DETAILED ACTION

Election/Restrictions

Applicant's election of Group I, claims 1-5 in the reply filed on 2/19/2008 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claims 6-28 are withdrawn from consideration, While claims 1-5 are treated on the merits below:

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. A reaction of a compound of formula 1 to form a compound of formula 2 is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). Clearly, the examples clearly show that an anhydride of formula 1 is esterified or transesterified to produce esters, amide esters or thio esters of formula 2. However, the claims do not require this feature. The rejection would be overcome if claim 1 was amended to clarify that the reaction step results in the formation of a compound of formula 2.

Art Unit: 1621

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "which is defined as reaction step". It should be clarified that the step of reacting the long chain N-acyl amino acid anhydride is the reaction step.

Claim 1 recites a reaction but does not recite a product. In this regard, it is unclear if the compound of formula 2 is the product.

It is unclear if the "m" functional groups are on the Z group or X.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(2) as being anticipated by JP 502973 (JP 973).

JP teaches the preparation of menthol esters of N-acyl long chain amino acid anhydrides:

Art Unit: 1621

(In the formula, $\text{R} = -\text{CH}_2-$ or $-\text{CH}_2-\text{CH}_2-$, $\text{R}_1 = \text{C}_{10}-\text{C}_{22}$ hydrocarbon radical)

The forgoing anticipates the formation of compositions with a product as disclosed in JP 973.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 973.

The rejected claims covers molar ratios and purification steps, which are well within the purview of those of ordinary skill in order to obtain an isolated product.
